

Using the definition of the scalar product of two vectors,

Determine the angle ( $\theta$ ) between the body diagonal (E) of a cube and one of its edges (C).

- A)  $\theta \simeq 40^\circ$       B)  $\theta \simeq 45^\circ$       C)  $\theta \simeq 50^\circ$       D)  $\theta \simeq 55^\circ$       E)  $\theta \simeq 60^\circ$

---

$$\|\vec{A}\| = 1 \quad \|\vec{B}\| = 1 \quad \|\vec{C}\| = 1 \quad \|\vec{D}\| = \sqrt{2} \quad \|\vec{E}\| = \sqrt{3}$$

$$\vec{C} \cdot \vec{E} = \|\vec{C}\| \|\vec{E}\| \cos \theta, \quad \text{so}$$

$$1 = \sqrt{3} \cos \theta$$

$$\theta = \arccos \left( \frac{1}{\sqrt{3}} \right) = 54.7356^\circ \simeq 55^\circ.$$

Answer **C**.
